At TKM Infotech we believe in adhering to stringent quality standards while maintaining warm client relations to forge continued business partnerships.

eAlert

SMS/E-MAIL MESSAGING SYSTEM

APPLICATIONS

eAlert can be used to provide timely alerts for

- Bank transactions
- Payments/repayments/premiums due
- Expiry dates, advices
- Daily account balance
- Emergencies
- System malfunction/error
- Results (exam, election, games, etc.)
- Greetings like birthday
- Insurance premium due or unpaid
- Employee instructions, reminders, to-do things
- Managers on events/updates of company activities
- Reminders, updates and more

All of us are in need of keeping track of a lot of events in our day to day life which could be either personal or business related. The requirements can vary from follow ups, meetings, birthdays, payments, repayments, monitoring and controlling. **eAlert** is a System that can alert you of these events at the right time on your hand held mobile device by sending a SMS or an e-mail.

eAlert is a web based, platform independent system developed in Java. It can work independently as a stand-alone system and/or integrated to any other third party system. To integrate to third party systems, **eAlert** provides files based on XML based interfaces. Bulk messages from third party systems can be uploaded to **eAlert** for delivery. The delivery reports provided by **eAlert** can be used for billing and other information purposes. Delivery reports are available in Excel or PDF formats. **eAlert**'s stand-alone mode provides a user interface to add subscriptions and register events for any customer. Each event can have attributes like start date, frequency, preferred time, repeat count, retry count etc.

Optionally clients may hire the **eAlert** system services from TKM Infotech and use it for delivery of bulk SMS messages. Clients can subscribe to this service with TKM Infotech and we will provide the client a web based interface to manage their account like upload messages, view/print delivery reports, collect billing information etc.

FEATURES

- Integration interface to third party systems to pull messages via XML, Text, File or JDBC/ODBC connection
- Delivery and Status reports in PDF or Excel
- Stand-alone events definition and message delivery
- Configurable event types: Event once, Repeated events, Multiple message events
- Delivery to multiple channels (phones, e-mail ids)
- SMPP/HTTP based implementations
- Platform independent
- Web based

ENDURING VALUES, LASTING SOLUTIONS

AVLSys

AUTOMATED VEHICLE LOCATOR SYSTEM

AVLSys is a web-based automated vehicle tracking system designed to locate your vehicles online. The vehicle (or fleet of vehicles) to be located is fitted with a GPS System. The vehicle fitted with the GPS module, with the help of GPS technology or GPRS connectivity, sends its absolute positions on earth (in longitudes and latitudes) to a base station or gateway computer continuously. The gateway computer system processes these data and records these coordinates. Users of the AVL System uses a web/browser based application software, to view and monitor the locations, speed, etc. of the vehicle. The location of the vehicle is displayed online on a map on the screen.

MODULES

AVL Fleet Management

Administration

- Add new vehicles
- Add new drivers
- Assign drivers
- Searching and grouping

Map Viewing (Custom/Google Maps)

- Standard map
- Satellite map
- Hybrid map
